DESIGN AND ACCESS STATEMENT

I am submitting plans for the replacement of all timber windows and doors with UPVC at the above property.

I am planning on replacing the windows with white UPVC double glazing with a slight change in the windows with some having smaller opening windows to be able to be opened, rather than having to open the larger windows we have at present (please refer to enclosed drawings).

The front door I would like to replace with a blue wood composite door similar to the one pictured below but without the windows each side.

Navy Blue Door

The reason for wanting the replacements is, as I am now a single mother of 3 children, I don't have the time to spend painting the windows/doors which are now in dire need of repainting. It will also weather/sound proof the house so much better.

All of the surrounding houses have UPVC double glazing.
