The market-leading Guardian Warm Roof is a revolutionary step forward in home improvement - a high performance, lightweight roof system that has been designed to replace your existing glass or polycarbonate roof or be installed as an alternative on your new conservatory.

Now, in partnership with VELUX®, Guardian Warm Roof exclusively fit VELUX roof windows in their range of solid roof systems.

The Guardian Warm Roof System dramatically transforms your conservatory into an ambient, much needed space that can be used daily, all year round.

Less sun glare and fading of furniture

Cooler in summer

Less rain noise and 100% weathertight

Warmer in winter

Designed to retain the conservatory's original windows, doors, frames and walls, the Guardian Warm Roof System is fully tested and approved to all thermal and structural standards.

Bespoke integrated box gutters

Ridge cappings to match roof tiles or slates

Choice of roof tiles or slates in a range of colours

Standard rainwater systems

Breathable waterproof membrane

Exterior grade plywood

Structural pre-engineered frame

Ventilated roof eliminates condensation and mould growth

3 layers of high performance rigid insulation board (125mm) U-value 0.18 W/m.K (England & Wales) and 0.15 W/m.K (Scotland)

VELUX®

Roof windows in a range of sizes

Ensuring your peace of mind

Question

Will my conservatory be able to take the weight of the Guardian Warm Roof?

Answer

The Guardian Warm Roof System has been specifically designed to weigh no more than a glazed roof and is fully tested and approved by industry experts for its structural performance. In addition, the results have enabled certification by the LABC (England & Wales) and the LABSS (Scotland). The Guardian roof is designed and engineered to replace the entire existing roof. Some conversion systems only overlaid the existing roof which was never designed to carry additional weight.

Conservatories have reinforcing posts to take the weight of glazed roofs. Conservatories built before 1996 may not have sufficient support. The Guardian survey will determine the suitability and, where required, will provide a structural solution to support the Guardian Warm Roof.

How can Guardian guarantee the thermal performance of the warm roof system?

The Guardian Warm Roof System has been subjected to independent thermal analysis that takes into account the entire roof assembly, including cold bridging, to give a true U-value as required by Building Regulations. Cold bridging has a major impact on U-value and, if not taken into account, will reduce thermal performance. Many roof conversions state similar U-values or better, but these are theoretical unless the entire assembly has been thermally tested. If in doubt, ask!

Why is the Guardian Warm Roof structural frame made from aluminium?

After months of testing the Guardian Warm Roof with various materials, a superior lightweight aluminium frame was chosen due to its high-performance structural properties. Many roof systems use timber, which weighs significantly more, putting additional stress on the existing conservatory walls. Timber is also prone to shrinkage and is often cut to size on-site unlike the Guardian Warm Roof structural frame which is manufactured and pre-assembled under quality controlled factory conditions.

I've read reports of condensation and mould with these types of roof - how is Guardian different?

In compliance with LABC / LABSS, the Guardian Warm Roof is a ventilated roof. Slots in the ring and ridge beams allow air to flow freely through the roof allowing any moisture to exit. With many unproven roof conversions, moisture can form inside the roof causing staining and mould growth to the internal plasterboard, leading to deterioration or even failure of the roof components.

Will I need to apply for Building Regulations for the new roof?

Under certain criteria, the Guardian Warm Roof System would be exempt from Building Control approval - however, we strongly recommend that approval always be sought. But, as the Guardian Warm Roof System carries LABC / LABSS certification, the Building Control process should proceed faster, smoother and without complication.

Due to the high performance insulation and with Building Control approval, the Guardian Warm Roof System may allow the removal of the wall between the house and conservatory, providing the flexibility to extend and enlarge an existing kitchen, living room or bedroom.

System Benefits

Rapid Installation

Installed by one of our Team Guardian Registered Installers, the whole conservatory roof installation only takes a few days and is completed with minimum disruption to your home.

Engineered for Quality

Each Guardian roof is engineered precisely to your individual requirements and pre-assembled under controlled factory conditions to ensure the highest quality before delivery to site.

Energy Efficient

It has been independently proven that a Guardian Warm Roof can save you money on your energy bills, using high performance insulation that achieves a superior U-value of only 0.18 W/m.K (England & Wales) and 0.15 W/m.K (Scotland).

Reduces Noise & Sun Glare

Your new room will be quiet and comfortable all year round as any rain / weather noise will be eliminated.

The Guardian roof also significantly reduces sun glare, which in turn prevents sun bleaching to fixtures and fittings, removing the need to fit blinds to the windows of your conservatory.

Temperature Control

A Guardian Warm Roof regulates the temperature of your conservatory to ensure it's a pleasant temperature whatever the season.

The high-performance insulation guarantees lifetime thermal performance, ensuring your room is economical to heat.

Complete Peace of Mind

The Guardian roof is a superb system and is LABC and LABSS approved.

“With Building Control approval, internal dividing doors or walls can be removed to provide an open-plan living space.”

We provide both standard and bespoke Warm Roof solutions

Edwardian

The Classic Sunroom shape. Together with attractive roof windows the Edwardian Guardian Warm Roof is the traditional option for styling and convenience, maximising the room space below. Sympathetic to all house styles, the ridge of the roof is so versatile it can also be the perfect solution to a Bungalow extension.

Lean-to

The Guardian Lean-to is ideal to maximise space at the rear of the house. The ends can either have one or two hips (slopes). Ideal for kitchen extensions, the roof can go as low as 15° with roof windows.

Victorian

The Victorian roof is also ideal if you may not have much available space in your garden. The internal plaster finish on the roof has an attractive appearance with its facet front finish.

Gable Ended

The gable ended main feature is the continuous height it brings to the room due to its long central ridge. The gable end allows you to get the most from your roof windows providing a light and airy space.

Combination

Increase your options with a combination Guardian Sunroom. A P-shape simply combines the benefits of two different styles to maximise your living environment. A T-shape combination is available, as well as bespoke solutions to make your conservatory as individual as you are.

“A Guardian Warm Roof is the ideal solution to replace your existing roof and also as an alternative on all new conservatory installations.”

Roof Tile and Shingle Options

Guardian Esprit Shingle

Exclusive to Guardian, the Esprit Shingle is made from lightweight high grade steel with Aluzinc® coating for incredible strength and resistance and features a unique 'hidden fix' feature that leaves no nails exposed to corrosion.

The choice of colours means Esprit can match or compliment virtually any home.
