

The waste which is a result from the toilet would go into a new cess pit which will be located next to the new barn.

It will consist of a new IBC tank which will be lowered into a pit.

I empty the septic tanks on the islands so have all the machinery needed to do this, as it is a toilet just for staff or contractors visiting the farm I do not expect the tank to fill too quickly however as its location is very easy to get too regular checks can be made.
