Removal of Palm in the rear garden of 3 Branksea Close

The Palm tree poses a safety risk in high winds it appears very unstable. The height of the tree is of main concern as it is unstable and would cause harm to person and/or property if it should become uprooted.

The works recommended by Ned Rogers are as follows, all of the cut sections will have to be lowered to the ground and of course all of the arisings would have to be carried by hand out of the close, taking it to 4 feet or so then chemically treated to prevent re-growth.
