## TRI-SEPARATOR

Our triple selection system otherwise known as a Tri-Separator allows the user to choose between three user friendly disposal options.

A good example of this would be Mixed Recyclables, General Waste and Food Waste. Though these options are used frequently in the UK, the client can decide how they would like to label the options.

The Tri-Separator reduces the amount of refuse going to landfill by 66% and promotes an environmentally aware community by encouraging all users to act courteously when disposing of their waste.
