DESIGN & ACCESS STATEMENT

This project is to open a takeaway food venue on Porthcressa Beach. Having run a restaurant on the island for 22 years I am acutely aware of the growing need for food outlets and believe this simple business would be an asset to the community and tourism industry alike.

The design of the venue would involve a large serving window from where it would be possible to see the food in a chilled display. Customers would access the venue from Porthcressa promenade and would order via the window. There is to be no access inside for customers.

The interior of the room is being refurbished to meet food safety standards. A meeting has already been held with the Environmental Health Officer in order to ascertain requirements for the project. These have been duly noted and incorporated into the plan.

Environmental and sustainability concerns have also been considered in the project. The ceiling and walls have been insulated and the window will be double glazed. Attention will be paid to choosing low emission machinery. And all disposables used in the business will be plant based and recyclable or compostable as available.

The proposed hours of operation would be late morning until early evening so should cause no disturbance to any local residents or businesses.
